BEYOND THE ALERT

THE ALERT IS ONLY STEP ONE.

What happens after a cold-chain temperature warning?

DETECT QUALIFY REVIEW RECORD

I built a software prototype to explore the decisions after detection.

SOFTWARE-ONLY SIMULATED OUTCOMES SWIPE TO EXPLORE →

THE REVIEWED WORKFLOW

From a reading to a reviewed decision.

01
Signed telemetry
Software HMAC + identity / replay checks

02
Heuristic distress
Exposure model, not a food-safety verdict

03
Buyer qualification
Full lot · capacity · funds · reachability

04
Reservation
Simulated resources held; no settlement yet

05
Operator confirmation
A separate authorized reviewer must decide

06
Ledger + reported receipt
Simulation recorded; receipt is an assertion

Automatic initiation ≠ automatic final settlement.

ACTUAL ACCEPTANCE-RUN SCREENSHOT

Real screens. Synthetic outcomes.

Separate buyer and operator browsers completed the reviewed flow.

CROPPED FROM THE ACTUAL LOCAL SYNTHETIC TEST

₹1,08,780

SIMULATED FARMER CREDIT

90.65%

OF THE ₹1,20,000 TEST BASELINE

EVIDENCE, NOT INFLATED CLAIMS

Less “it works.” More “here’s what I checked.”

51

PYTHON TESTS

Regression suite: no failures or errors

2,230

CALCULATION ASSERTIONS

Python / .NET reference parity

70

ROUTING CASES

7 profiles · 2,100 field comparisons

Also checked: five portals, role isolation, duplicate guards and forced-crash recovery.

Software evidence. Not physical-rescue evidence.

THE MOST USEFUL BUG

My best result wasn’t a green tick.

WHAT THE FIRST TESTS MISSED

Operator-only smoke tests did not catch a buyer-role portal/API access mismatch.

WHAT CHANGED

Fixed buyer-scoped access. Then tested the full browser journey with separate buyer and operator accounts.

A passing admin dashboard is not proof that every user journey works.

PRAVEEN SUDIREDDY

Digital Specialist Engineer (DSE), Infosys

BUILT IN PUBLIC. BOUNDARIES INCLUDED.

Built to learn. Designed to show its limits.

TESTED IN SOFTWARE

→ Reviewed end-to-end simulation

→ Scoped access + recovery controls

→ Deterministic reference parity

NOT CLAIMED

— Real payments or verified physical rescue

— Field-validated shelf-life accuracy

— Production deployment certification

Hardware fabrication is excluded.

What would you test next?
